COMPOSITES

The search for a material that is durable and long-lasting has ended. Mimicking granite, marble, and stone with uncanny similarities is one of its impeccable features. Challenging these materials in a contest of durability leaves us with the reigning champion: "solid surface". Since it is non-porous, nothing passes through it and seam damage is a thing of the past. Now durability is the name of the game. Seamlessly, solid surface gives the impression of an intact surface without any nasty barriers. Solid surface is a shapeshifter.

Sizes (AxBxH)
